

**Commercial, Industrial and
Domestic electrical contractors**

Meeting every challenge

Arun Construction Services prides itself on its ability to carry out all types of electrical work to the highest possible quality and strictly to current industry standards (BS 7671:2008 A3)

We have undergone the rigorous NICEIC assessment process and are accredited as approved contractors and domestic installers. Our continued accreditation depends on repeat assessment and adherence to the policies which ensure scheme requirements and technical standards are always met.

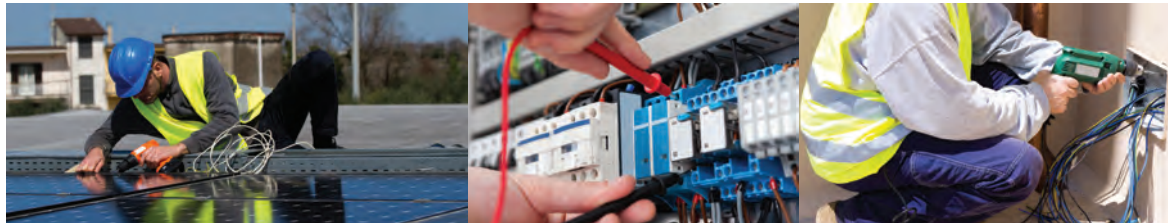

Even when schedules are tight, the quality of our installation is always paramount. Our Quality Assurance processes are robust and are maintained throughout the build, testing and commissioning stages of every project.

- Commercial, Industrial and Domestic electrical installations
- Electrical system design
- Electrical testing and inspection
- Lighting design and installation
- Electrical refurbishment
- Building management systems
- Emergency lighting
- Domestic ventilation systems
- PAT testing
- Cable containment systems
- HV Design and HV Switching
- HV Installation and maintenance
- Commercial solar installers

Managing any project

Our team of dedicated engineers have vast experience in commercial, industrial and domestic electrical installations and our involvement in large scale solar farm projects means that our electrical team is highly qualified in both low and high voltage procedures and requirements. In the past three years we have been responsible for installing solar sites capable of generating around 190 Megawatts of energy – enough to power over 22,000 homes.

We are able to apply that experience of working in challenging environments and against tight deadlines to all electrical installations of any specification, both new schemes or those undergoing extension, alteration or repair. Partnerships with a range of specialist contractors enable us to provide the complete project management service from inception to completion.

Our commitment to continued professional development programmes for our teams guarantees the highest standards of workmanship supported by awareness of, and adherence to, all current industry regulations that relate to specific projects and applications.

Testing and Inspection

Arun personnel have all relevant qualifications for carrying out electrical testing, inspections and reporting. We will ensure any new installation is functioning as it is designed to do, and meets all legal requirements.

We also offer an ongoing inspection process to ensure the installation stays in perfect order and conforms to any changes in legislation.

Certification services include:

- Fixed installation test and inspection
- Electrical installation condition reporting
- Installation verification reports
- Earth electrode testing
- Thermal imaging testing
- Conductance testing
- Fault finding
